DETAILED ACTION

Allowable Subject Matter

Claims 61-67 are allowed.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 68-70 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,398,853. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 68 recites "centrifugal turbomachinery simultaneously communicating with more than one of the plurality of function compartments", and claim 1 of U.S. Patent No. 6,398,853 recites "centrifugal turbomachinery coupled to a portion of the function compartments and including an impeller having a plurality of impeller paths...". Examiner respectfully submits that the "comprising" language of claim 68 of the current application provides for structure which is not directly recited within the body of the claim. Examiner furthermore notes that structure of the "centrifugal

turbomachinery" of claim 68 inherently includes a plurality of impeller flow paths.

Therefore claim 68 is prima facie obvious over claim 1 of U.S. Patent No. 6,398,853.
